

5 SNR Linear Guides

5.1 Overview

SNR Linear Guides are high-quality precision products. They combine customer-oriented product development and high quality requirements. They offer the customer a wide product range for various applications in all areas of industry.

The most important characteristics are:

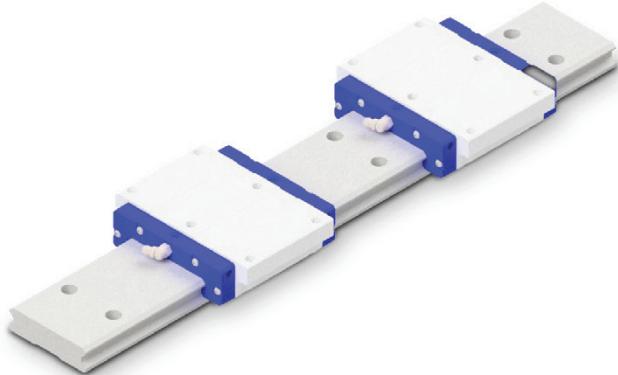

SNR standard Linear Guides

- Arrangement of the raceways at a 45° angle which results in equal load ratings in all main directions
- Low system friction with a maximum friction coefficient, μ of 0.003 due to circular arc grooves
- High tolerance compensation and error compensation capability due to DF-arrangement of the race ways
- Multitude of lubrication connections can be mounted on all sides of the carriage
- All seals in two-lip versions for optimal protection of the carriage against liquid and solid foreign particles
- Wide range of sealing options for special applications
- Low-noise and long-term maintenance-free ball chain type carriages with long service life time
- Linear Guides with ball chain and conventional types on the same rail
- Dimensions according to DIN ISO 12090-1 and DIN ISO 12090-2.
- Velocity of up to 5 m/s
- Acceleration of up to 50 m/s²

Wide SNR standard Linear Guides without ball chains

- Arrangement of the raceways at a 45° angle which results in equal load ratings in all main directions
- Wide version for high moment loads in Mx direction
- Velocity of up to 5 m/s
- Acceleration of up to 50 m/s²

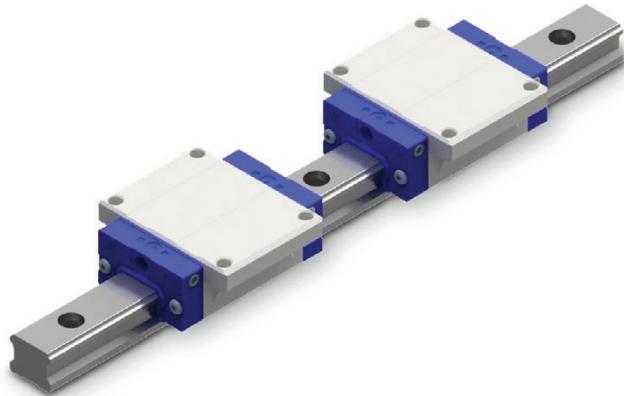

SNR miniature guides

- Compact design
- Profile rail and carriage made of corrosion-resistant material
- Available in narrow and wide rail versions
- With ball chain and in conventional type available

5.2 LGBCH_F

Linear Guide with ball chain, carriage in flange design, normal design height

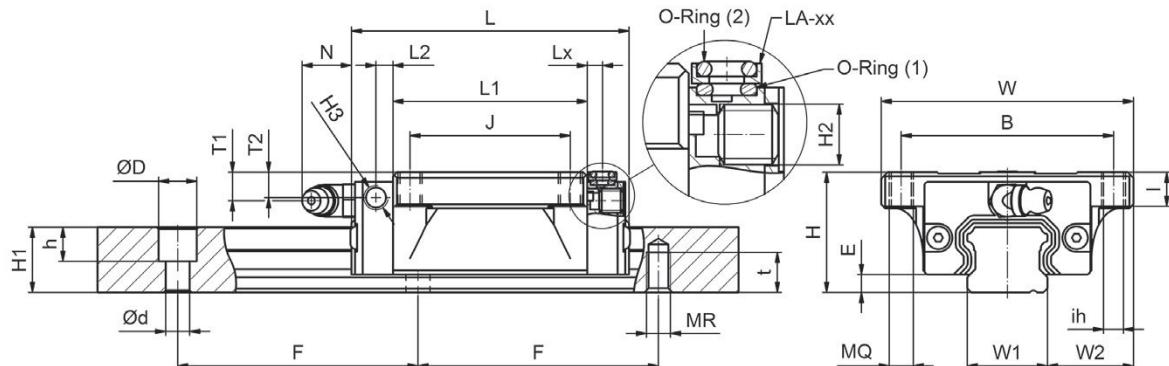

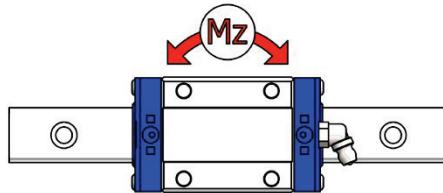

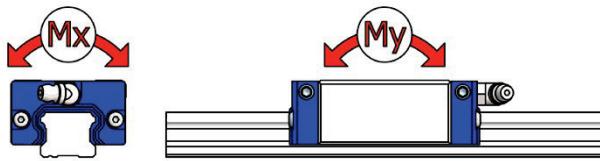

Example of type code
